Put the DJNC Songbook on your phone

A step-by-step guide to using the songbook like a real app, even with no internet.

Two ways to use it

1. Just open the link. Tap the songbook link you were sent and it opens in your browser. You can stop here if you like. It needs internet each time.

2. Install it as an app (recommended). The songbook gets its own icon on your Home Screen, opens full screen without browser bars, and keeps working with no internet. It takes about one minute and only needs to be done once.

> **Before you start:** be connected to Wi-Fi or mobile data and have the songbook link ready. Do the steps once, while online. After that you can use the app anywhere.

iPhone or iPad (use Safari)

1	Open the songbook link in **Safari** (the blue compass icon). If you tapped the link inside WhatsApp, Messages or another app, it may open in a small built-in browser. Look for a compass or "Open in Safari" button, or copy the link and paste it into Safari.
2	Wait until the page has fully loaded and you can see the list of songs. Stay on it for a few seconds. You may see a small message saying **"Ready to use offline"**. That means it has been saved.
3	Tap the **Share** button, a square with an arrow pointing up. On iPhone it is at the bottom of the screen; on iPad it is at the top right.
4	Scroll down the menu and tap **Add to Home Screen**. If you do not see it, scroll to the bottom of the menu and tap **Edit Actions** or **More**.
5	Leave the name as **DJNC Songbook** (or change it). If you see a switch called **Open as Web App**, leave it on.
6	Tap **Add** at the top right. The church logo icon now appears on your Home Screen.
7	From now on, open the songbook from that icon. It opens full screen like any other app.

Android phone (use Chrome)

1	Open the songbook link in **Chrome**.
2	Wait until the page has fully loaded and you can see the list of songs. Stay on it for a few seconds.
3	Tap the **three dots** menu at the top right of Chrome.
4	Tap **Install app**. If you do not see it, tap **Add to Home screen** instead.
5	Tap **Install** (or **Add**) to confirm. If it asks where to put the icon, choose **Add automatically**.
6	Open the songbook from its new icon on your Home screen or in your app list.

Samsung Internet: tap the menu button (three lines), then **Add page to**, then **Home screen**.

On a computer (Chrome or Edge)

1	Open the songbook link in Chrome or Edge.
2	At the right end of the address bar, look for a small **install** icon (a screen with a down arrow). Click it, then click **Install**.
3	The songbook opens in its own window. You can find it later in your apps or Start menu.

Using it offline

After you have opened the songbook once while online, it is saved on your phone. To test it, turn on **Airplane Mode** and open the app from its icon. You should see the full song list, and you can open any song page.

> **Good to know:** when you are online again, the app quietly checks for improvements. If you hear the songbook was updated, close the app completely and open it again (once or twice) to see the new version.

How to use the songbook

1	**Choose a book.** Tap the **Book** button in the bar at the bottom of the screen to switch between the **New Book** and the **Old Book**. Each book keeps its own favorites and lists.
2	**Search in English.** Type a song name the way it sounds, for example **tande deva**, and the matching Kannada titles appear. You can also type a **song number**.
3	**Browse by letter.** Tap a Kannada letter in the row of circles under the search box to see songs that start with it. Tap **All** to clear it.
4	**Use categories.** Tap the **Category** button in the bottom bar and pick from the list (Praise, Worship, Telugu, Hindi, Christmas and more) to see only those songs, in the same order as the book. Choose **All songs** in the same list to go back.
5	**Make your own list.** Tap **Category**, then **+ New list** at the bottom, give it a name, then tap songs to tick them. Tap **Done**. Your list now appears under **My lists** in the Category list. Tap **Edit list** to add or remove songs later, or the bin button to delete it. While viewing a song, tap **List** at the bottom to add it to one of your lists.
6	**Open a song.** Tap it, and the song page from the book appears.
7	**Turn pages.** Put your finger on the right edge of the page and drag left to turn to the next page. Drag from the left edge to the right to go back. Let go early to just peek, and the page springs back. You can also tap the edges or use the arrow buttons.
8	**Make the words bigger.** Tap **Aa** for lyrics view, which trims the margins and fills the screen, then use the slider to change the size. Pinch a song page with two fingers to zoom in or out, or double-tap to zoom in and double-tap again to zoom out.
9	**Favorites.** Tap the star beside a song to save it. Tap **Favorites** in the bottom bar to see only your starred songs.
10	**Need an idea?** Tap **Surprise me** for a random song. Use **Theme** in the bottom bar for dark mode.

About favorites: your favorites and recent songs are saved on your own phone only. They are private to you and are not shared with anyone. If you delete the app or clear your browser data, they are cleared as well.

If something is not working

The icon is blank or looks plain. Delete the shortcut (press and hold it, then remove it) and add it again from step 1, making sure the page had finished loading first.

I cannot find "Add to Home Screen" on iPhone. Make sure you are in Safari, not inside another app. Then try the Share button again and scroll down the menu.

It does not open without internet. Open the app once while you have a connection and wait a few seconds on the song list. Then try Airplane Mode again.

The pages look old after an update. Close the app completely (swipe it away), connect to the internet, and open it again. Open it a second time if needed.

I want to remove the app. Press and hold the icon and choose **Remove App** (iPhone) or **Uninstall** (Android).
